## BUILD AN INSECT HOUSE

YOU WILL NEED: A small plastic drink bottle with lid.  
A length of string approx 1m

- 1) Remove lid from bottle and keep it safe.
- 2) Cut base from the bottle so it is open ended.
- 3) Pass string through the bottle from neck to base, tie the ends together with enough length to allow it to hang.
- 4) Replace bottle lid, screwing down to hold string in place.
- 5) Fill bottle, from the open base, with lengths of dried stems, twigs or you could use recycled drinking straws (but these could take a while to collect!) Pack the bottle firmly so contents will not fall out. Make sure nothing sticks out from the bottle.
- 6) Hang your insect house in a hedgerow or undergrowth with the cap higher than the open base. This allows rain to drain off.   
out of sight!
